REGIONAL GEOLOGY & OPERATIONAL CONTEXT

Geological Setting & Reservoir Architecture: The demonstration portfolio spans intracratonic Paleozoic and Mesozoic sedimentary basins comprising clastic sandstone reservoirs and carbonate sequences sealed by regional evaporitic caprocks at depths of 2,100 to 3,600 meters.

Surface Gathering & Industrial Infrastructure: Integrated value chain encompassing gathering manifolds, central processing facilities (CPFs), gas compression trains, stabilization units, and coastal export terminals.

Flaring Abatement Roadmap: Flaring reduction roadmap aligned with the World Bank Zero Routine Flaring (ZRF) by 2030 initiative and statutory flaring intensity caps (<= 1.00% of gross gas produced). All custody transfer meters and fuel gas chromatographs are maintained with tamper-evident digital records. Ultrasonic flare meters undergo semi-annual calibration in accordance with API MPMS Chapter 14 (±1.5% accuracy). Flaring destruction removal efficiencies are optically verified with infrared VISR telemetry (98.00% DRE). Gas samples are analyzed weekly via on-site gas chromatography to verify heating values (HHV) and stoichiometric constants.

7. INVENTORY DATA QUALITY AUDIT & FIELD IMPROVEMENT ROADMAP

Algorithmic audit of telemetry data completeness, flowmeter calibrations, sampling frequencies, and continuous improvement initiatives in accordance with ISO 14064-1:2018.

Audit Dimension	Database Observation & Tier	Recommended Action & Implementation	Priority	Standard Ref.
Fuel Property Sampling & Testing Frequency	Database logs 0 laboratory gas chromatography stream analyses across 442 facilities.	Establish mandatory monthly gas chromatography sampling for all active fuel gas headers and flare manifolds to ensure Tier 3 calculation accuracy.	**High**	API Compendium 2021 Section 4.1 & Corporate MRV Standard
Flare Destruction Efficiency (DRE) Measurement	Flare emissions currently rely on default EPA 98.0% DRE assumptions without field-calibrated optical measurements.	Deploy real-time optical gas imaging or VISR multi-spectral flare cameras to replace conservative default DRE with measured empirical rates.	**High**	Executive Decree 21-330 & API Compendium Section 5
Equipment Leaks & LDAR Program	Certified component census active with 28 monitored components and 6 OGMP survey campaigns.	Maintain bi-annual EPA Method 21 optical gas imaging (OGI) surveys and execute rapid repair protocols within 5 calendar days for identified leak sources.	**Medium**	OGMP 2.0 Gold Standard & EPA Method 21
Field Decarbonization: Project X	Mitigation initiative logged in database with estimated reduction of 500 t CO2e/year.	Ensure timely commissioning and verify emission delta through continuous telemetry (Target completion: 2026).	**Medium**	National Decarbonization Plan 2030
Field Decarbonization: x	Mitigation initiative logged in database with estimated reduction of 50 t CO2e/year.	Ensure timely commissioning and verify emission delta through continuous telemetry (Target completion: 2026).	**Medium**	National Decarbonization Plan 2030
Field Decarbonization: done	Mitigation initiative logged in database with estimated reduction of 20 t CO2e/year.	Ensure timely commissioning and verify emission delta through continuous telemetry (Target completion: 2026).	**Medium**	National Decarbonization Plan 2030
Continuous MRV Governance & Meter Reconciliation	Mass and volumetric balance reconciliations show minor variance between plant inlet master meters and individual consumer equipment meters.	Designate dedicated facility HSE reporting focal points to perform monthly volumetric reconciliation and instrument temperature/pressure calibration.	**Medium**	ISO 14064-1:2018 Clause 6.2 & Executive Decree 21-330

EXECUTIVE MRV SIGN-OFF & VERIFICATION CERTIFICATE
