CAUTIONARY STATEMENT ABOUT THE GHG EMISSIONS ESTIMATES

The estimated greenhouse gas emissions (GHG) described in this report for the reporting years in the "Sonatrach Corporate" Region are derived from a combination of measured and estimated data using the best available information obtained.

Industry standards and best practices for estimating GHG emissions, including guidelines from the Intergovernmental Panel on Climate Change (IPCC), the United States Environmental Protection Agency (EPA), the American Petroleum Institute (API), Sonatrach, and ISO 14064 have been applied.

Conservative assumptions regarding the number and type of emitting equipment have been used, and they will be refined as more comprehensive emission inventories are developed. The uncertainty associated with emission estimates depends on the variation of processes and operations, the availability of sufficient representative data, the quality of available data, and the methodologies used for measurement and estimation.

This report aimed to estimate both direct GHG emissions (Scope 1) and indirect emissions (Scope 2) associated with purchased electricity used in our operations and Scope 3 when data is available.

EXECUTIVE SUMMARY

The 2026 GHG Inventory consolidates emissions from 170 facilities. Represents a precise accounting of direct and indirect greenhouse gas emissions in adherence to international standards. Total emissions are calculated in metric tonnes of CO₂ equivalent (tCO₂e) under IPCC AR5 (100 GtCO₂e). Combustion has been identified as the significant emission source over the reporting period.

METHANE (CH ₄)	PRIMARY DRIVER	TARGET STATUS
632803196.9 t	Combustion	NO TARGET

2030 Decarbonization Roadmap & Operational Milestones

Performance Milestone	Observed Metric	Strategic Decarbonization Significance
Scope 1 & 2 Emissions Trajectory	8,409,569,158,175 tCO ₂ e	15.9% reduction achieved relative to 2021-2023 baseline average; on track for -30% by 2030.
Methane Abatement Performance	632,803,197 tCH ₄	65.9% reduction from baseline following flare optimization and comprehensive OGI LDAR campaigns.
Operational Flaring Volume	100 kNm ³	Lowest annual flaring on record (-38.0% vs baseline); compliant with Executive Decree 21-330 Art. 9.
Flare Destruction Efficiency (DRE)	98% Measured	Multi-spectral VISR camera verified; eliminates default 98% uncertainty.

ABOUT SONATRACH

Sonatrach is the national state-owned oil company of Algeria. Founded in 1963, it is known today as the largest company in Africa with 154 subsidiaries, and often referred to as the first African major. In 2021, Sonatrach was the seventh largest gas company in the world.

As a major global player, we are integrating sustainability into every aspect of our value chain. Our strategy prioritizes significant greenhouse gas (GHG) emission reductions, methane abatement, and energy efficiency.

1. GENERAL DESCRIPTION

Description of the Reporting Organization

Sonatrach is committed to leading the low-carbon energy transition. As a major global player, we are integrating sustainability into every aspect of our value chain. Our strategy prioritizes significant greenhouse gas (GHG) emission reductions, methane abatement, and energy efficiency.

Person or Entity Responsible for the Report

Logged In User

Reporting Period

The reporting period is for the year 2026.

GWP Values Used

The Global Warming Potential (GWP) values used in the calculations are sourced from: IPCC AR5.

Verification Status & Statement of Compliance

Verification Status: Not externally verified

Statement of Compliance: This GHG report has been prepared in accordance with the ISO 14064-1:2018 standard.

Principles of the MRV System

This inventory adheres to the core MRV principles (TECCI):

- Transparency: Assumptions and methodologies are clearly explained.
- Accuracy: Emissions are estimated precisely, minimizing systematic biases.
- Consistency: Methodologies are consistent across reporting years.
- Comparability: Results are structured to allow comparison with other entities.
- Completeness: All relevant emission sources, sinks, and greenhouse gases within the defined boundaries are included.

2. ORGANIZATIONAL BOUNDARIES

The consolidation approach used for organizational boundaries is: Operational Control and Operational Control (Full Operational Control) and Operational Control (Wholly Owned (100%)) and Financial Control (Wholly Owned (100%)) and Equity Share.

This inventory consolidates 170 facilities within the specified operational and equity boundaries:

Facility / Asset	Code	Segment	Boundary Type	Equity %	Status	Country

3. REPORTING BOUNDARIES

Emission Categories Evaluated

In compliance with ISO 14064-1:2018, emissions are categorized as follows:

- Category 1: Direct GHG emissions and removals
- Category 2: Indirect GHG emissions from imported energy
- Categories 3-6: Other indirect GHG emissions

Exclusion Criteria

The criteria for significant emissions and exclusions are defined as:

None provided

4. HYDROCARBON PRODUCTION PROFILE

Hydrocarbon production data reflects operational throughput across active extraction, processing, and reinjection assets. Gaseous production comprises gross gas extraction, gas utilized for reservoir reinjection, and associated gas. Liquid production includes stabilized crude oil, lease condensates, and liquefied petroleum gas (LPG). Standard reporting incorporates both physical volumes and energy-equivalent barrels of oil equivalent (BOE).

Hydrocarbon Stream / Product	Unit	Reported Volume	Equivalent MMBOE / Share
Gross Gas Production	MMSm ³	4956400.57	854.55 MMBOE
Injected Gas Volume	MMSm ³	8,990.01	69.60 MMBOE
Gas Production w/o Injected Gas	MMSm ³	767.50	5.94 MMBOE
Liquid Production (Crude Oil, Condensates, LPG)	MMBOE	55.38	55.38 MMBOE
Total Production (Gross Extraction)	MMBOE	130.93	100.0% Baseline Denominator
Total Production without Injected Gas	MMBOE	61.27	Net Operational Throughput
Total Saleable Production	MMBOE	56.62	Commercial Sales Denominator

5. QUANTIFIED GHG INVENTORY & MODULAR BREAKDOWN

Table 5.1: Consolidated Emissions by ISO 14064-1 Category

Category (ISO 14064-1:2018)	Emissions (tCO ₂ e)	Relative Share (%)
Category 1: Direct GHG emissions (Scope 1)	8,409,567,617,747.49	100.0%
Category 2: Indirect emissions from imported energy (Scope 2)	1,540,060.68	0.0%
Categories 3-6: Value chain indirect GHG emissions (Scope 3)	366.85	—
Total Consolidated Footprint (Scopes 1+2)	8,409,569,158,175.02	100.0%

Table 5.2: SANGEA Modular Inventory Breakdown

SANGEA Accounting Module	Emissions (tCO ₂ e)	Covered Equipment & Operational Scope
Stationary Combustion	8,409,564,218,317.2	Gas turbines, compressor drivers, heaters, thermal oxidizers
Flaring (Routine, Non-Routine, Safety)	2,403,118.3	Central processing facility (CPF) flares, low-pressure flares, pilots
Equipment Leaks & Fugitives	406,197.9	Valves, pump seals, compressor rod packing, flanges
Tank & Process Venting	158,560.3	Atmospheric storage tanks, glycol dehydrators, pig launching/receiving
Scope 2 (Purchased Electricity)	1,540,060.7	Purchased power imported from national electricity grid
Total Operational Footprint	8,409,569,158,175	Comprehensive Operational Inventory (API Compendium 2021)

6. OPERATIONAL FLARING & EXECUTIVE DECREE 21-330

Flaring operations are classified into Routine, Non-Routine, and Safety flaring pursuant to the World Bank Zero Routine Flaring (ZRF) initiative and Algerian Executive Decree No. 21-330. Executive Decree 21-330 Article 9 imposes a binding national limit: total volume of gas flared from hydrocarbon production and processing installations must remain below 1.00% of gross gas production.

Flaring Category	kNm ³	MMSm ³	Share (%)	tCO ₂ e	Operational Scope
Routine Flaring	56	0.056	56%	0	Continuous flaring of associated gas during normal operations
Non-Routine Flaring	40	0.040	40%	0	Process upsets, plant turnarounds, depressurizations, unit trips
Safety & Purge Flaring	4	0.004	4%	0	Continuous flare header sweep, pilot gas, and positive pressure seal
Total CPF & Field Flaring	100	0.100	100.0%	210.2	Consolidated Annual Flare Stream

Executive Decree 21-330 Article 9 Compliance Verdict

Compliance Metric	Observed Value	Statutory Limit	Governing Standard	Compliance Verdict
Flaring Intensity (% Gross Gas)	0.003%	"d 1 . 0 0 %	Executive Decree 21-330 Art. 9	COMPLIANT (PASS)
Flare Destruction Efficiency (DRE)	98%	98.0% Standard Default	VISR Infrared Multi-Spectral Camera	VERIFIED EFFICIENT
Year-over-Year Flaring Trajectory	-99.92%	Negative Trend (<0%)	Corporate Decarbonization Roadmap	ON TRACK

7. CRITERIA AIR POLLUTANTS & DECREE 06-138

Criteria Air Pollutants (CAP) are estimated under a dual methodology combining API Compendium 2021 Section 4/5 stoichiometric emission factors for mass emissions with isokinetic stack sampling in accordance with Algerian Executive Decree No. 06-138. Decree 06-138 establishes atmospheric emission limit values (ELVs) in mg/Nm³ for classified industrial facilities.

Pollutant	Combustion (t)	Flaring (t)	Leaks (t)	Venting (t)	Total Mass (t)
Nitrogen Oxides (NO _x)	2,845.28	279.87	—	—	3,125.15
Carbon Monoxide (CO)	865.58	1,176.16	—	—	2,041.74
Sulfur Dioxide (SO ₂)	18.47	1.81	—	—	20.28
Particulate Matter (PM)	71.15	493.88	—	—	565.03
Volatile Organic Compounds (VOC)	45.10	820.38	671.25	346.87	1,883.60

Executive Decree 06-138 Compliance Scorecard

Pollutant	Annual Mass (t)	Measured Conc. (mg/Nm ³)	Decree 06-138 Limit	Compliance Verdict
Nitrogen Dioxide	3,125.15	788.00 - 980.77	200.0	NON-COMPLIANT (Additional stack sampling scheduled)
Carbon Monoxide (CO)	2,041.74	7.50 - 9.84	150.0	COMPLIANT (Well below statutory limit)
Sulfur Dioxide (SO ₂)	20.28	< 0.01	800.0	COMPLIANT (Low sulfur sweet gas feed)
Particulate Matter (PM)	565.03	< 0.01	30.0	COMPLIANT (Complete gaseous combustion)
Volatile Organic Compounds (VOC)	1,883.60	3.41 - 11.13	150.0	COMPLIANT (Below statutory limit)

8. MULTI-METRIC INTENSITIES MATRIX

Greenhouse gas and methane intensities provide normalized operational benchmarks. Carbon intensity is quantified across both Total Production (including reinjected gas) and Saleable Commercial Products. Methane intensity is evaluated per the Natural Gas Sustainability Initiative (NGSI) mass-balance protocol.

Performance Intensity Indicator	Reported Metric	Accounting Protocol	Benchmark Reference
Carbon Intensity (Total Production)	0.31 kg CO ₂ e / BOE	SANGIA / Ipieca Guidelines	Top-Quartile Performance (<15.0 kg/BOE)
Carbon Intensity (Saleable Product)	0.37 kg CO ₂ e / BOE	Groupement Berkine Protocol	Normalized to commercial export sales
Methane Intensity (NGSI Protocol)	0.05 wt. %	NGSI Methane Protocol	Far below global 0.20% methane intensity ceiling
Flaring Intensity (Volume)	2.02 Sm ³ / BOE	World Bank GGFR Framework	Continuous reduction across all processing units
Flaring Intensity (Gas Ratio)	0.003 vol. %	Executive Decree 21-330 Art. 9	COMPLIANT with "d 1.00% statutory ceiling"
OGCI 2025 Industry Target	17.0 kg CO ₂ e / BOE	Oil and Gas Climate Initiative	Global upstream decarbonization benchmark

9. JV PARTNER EQUITY SHARE ALLOCATIONS

Under ISO 14064-1 equity share accounting and the Block 404a / Block 208 Association Contracts, operational GHG and methane emissions are allocated proportional to the participating interest of each joint venture partner.

Joint Venture Partner	Code	Country	Equity %	Allocated GHG (tCO ₂ e)	Allocated CH ₄ (tCH ₄)
Sonatrach (National Operator)	SH	Algeria	51.00%	4,288,880,270,669.3	322729630.4
Occidental Petroleum	OXY	United States	24.50%	2,060,344,443,752.9	155036783.2
Eni	ENI	Italy	12.25%	1,030,172,221,876.4	77518391.6
TotalEnergies	TTE	France	12.25%	1,030,172,221,876.4	77518391.6
Total Joint Venture (100%)	GB	Consolidated	100.00%	8,409,569,158,175	632803196.9

10. GHG REDUCTION INITIATIVES

There are 100 GHG reduction initiatives documented for this inventory.

11. QUALITY ASSURANCE & QUALITY CONTROL

To ensure the integrity of this inventory, a comprehensive Quality Assurance (QA) and Quality Control (QC) process is implemented in accordance with ISO 14064-1.

QC Category	Verification Action
Data Collection & Input	Verify sample of input activity metering data against DCS logs and custody transfer tickets.
Methodology Consistency	Ensure calculation algorithms conform to API Compendium 2021 across entire time series.
Flaring Metering Audit	Inspect ultrasonic flare meters and calibrate flow meters per API MPMS Chapter 14.
LDAR Survey Verification	Conduct optical gas imaging (OGI) surveys with FLIR GFx320 certified cameras to eliminate leaks.
Uncertainty Control	Examine unexplained deviations and apply Tier 3 site-specific factors where accessible.

12. REGULATORY FRAMEWORK & REFERENCES

This greenhouse gas inventory was compiled in compliance with Algerian national environmental legislation and international climate reporting standards. Primary statutory references include:

Statute / Standard	Regulatory Mandate & Scope
Executive Decree 06-138	Regulates atmospheric emissions and sets statutory limit values (mg/Nm ³) for industrial installations.
Executive Decree 21-330 Art. 9	Establishes a mandatory limit on gas flaring not to exceed 1.00% of gross gas production.
National Hydrocarbon Law 19-13	Governs hydrocarbon exploration, exploitation, and environmental protection in Algeria.
ISO 14064-1:2018	Specification with guidance at the organization level for quantification and reporting of GHG emissions.
API Compendium 2021	Standard industry methodologies and emission factors for petroleum and natural gas facilities.
UNFCCC / Paris Agreement	National Determined Contributions (NDC) alignment for low-carbon energy transition.

ANNEX A: 5-YEAR HISTORICAL DATA TABLES (2021–2025)

Table A.1: Consolidated 5-Year Hydrocarbon Production Profile

Product Stream	Unit	2021	2022	2023	2024	2025
Gross Gas Production	MMSm ³	8,743.69	9,462.00	9,786.27	10,077.56	9,757.51
Injected Gas Volume	MMSm ³	7,639.83	8,272.99	8,644.16	9,164.25	8,990.01
Gas w/o Injected Gas	MMSm ³	1,103.86	1,189.01	1,142.11	913.31	767.50
Liquid Production (Crude/LPG)	MMBOE	57.77	59.16	59.97	56.14	55.38
Total Production (Gross)	MMBOE	126.30	132.89	135.89	134.28	130.93
Total Production w/o Injected Gas	MMBOE	66.56	68.59	69.00	63.26	61.27
Total Saleable Production	MMBOE	61.28	63.06	63.76	58.47	56.62

Table A.2: Consolidated 5-Year Operational Flaring Streams

Flaring Category	Unit	2021	2022	2023	2024	2025
Routine Flaring	kNm ³	100,396	83,366	81,771	77,291	73,986
Non-Routine Flaring	kNm ³	3,370	2,682	3,425	30,007	36,369
Safety & Purge Flaring	kNm ³	87,596	106,967	53,952	6,706	7,543
Total Flared Volume	kNm³	191,362	193,015	139,148	114,004	117,898
Flaring Intensity (% Gas)	vol. %	2.19%	2.04%	1.42%	1.13%	0.91%
Decree 21-330 Status	Limit: "d 1.00	Exceeded	Exceeded	Exceeded	Exceeded	COMPLIANT

Table A.3: Consolidated 5-Year Performance Intensities

Intensity Metric	Unit	2021	2022	2023	2024	2025
Carbon Intensity (Total BOE)	kg CO ₂ e / BOE	17.44	17.48	16.84	14.79	14.58
Carbon Intensity (Saleable BOE)	kg CO ₂ e / BOE	35.94	36.84	35.88	33.99	33.72
Methane Intensity (NGSI)	wt. %	0.165%	0.160%	0.147%	0.072%	0.043%
Flaring Intensity (Volume)	Sm ³ / BOE	3.24	3.37	2.14	2.33	2.15
